

Will China develop new energy storage systems between 2025 and 2027?

BEIJING, Sept. 12 -- China on Friday unveiled an action plan to promote the development of new forms of energy storage between 2025 and 2027, amid efforts to support green energy transition and ensure the stability of new-type power systems.

How big is China's new energy storage fleet?

As of June 2025, China's new energy storage fleet had surpassed 100 GW, overtaking the pumped hydro additions for the first time, according to data from the China Energy Storage Alliance (CNESA). The new action plan, grounded in the nation's dual carbon goals, aims to grow the national new energy storage fleet to 180 GW by 2027.

Will China add 100 GW of new energy storage by 2027?

China aims to add more than 100 GW of new energy storage (primarily battery storage, excluding pumped hydro) by 2027, according to a new action plan presented by authorities on Friday.

How much money will China spend on energy storage?

According to an announcement from the State Council of the People's Republic of China, this would drive about RMB250 billion (US\$35.2 billion) in direct project investment. The plan's target represents a significant scaling up, even for the world's leading adopter and producer of energy storage technologies.

CEC's Tailored Solution CEC delivered a 2.8MW/6.02MWh C&I energy storage system, integrated with a high-performance EMS platform for intelligent control. The system supports peak shaving, load ...

China on Friday unveiled an action plan to promote the development of new forms of energy storage between 2025 and 2027, amid efforts to support green energy transition and ensure ...

The policy and regulatory roadmap is aimed at pushing China's installed base of large-scale energy storage - primarily lithium-ion battery energy storage systems (BESS) - to 180GW by ...

Announced by the National Development and Reform Commission (NDRC) and the National Energy Administration (NEA), the new plan is expected to drive CNY 250 billion ...

Based on the characteristics of China's energy storage technology development and considering the uncertainties in policy, technological innovation, and market, this study proposes a ...

1 China has a goal to install 180 gigawatts of battery energy storage systems by the end of 2027, with a direct project investment of \$35.2 billion.

Foreword Stepping up efforts to develop new energy storage technologies is critical in driving renewable energy adoption, achieving China's 30/60 carbon goals, and establishing a new ...

By 2027, the large-scale expansion of battery storage is expected to play a vital role in supporting China's renewable energy transition. With sustained investment, industry innovation, and ...

As investment in renewable energy generation continues to rise to match increasing demand so too does investment, and the opportunity to invest, in energy storage. Estimates indicate ...

Under the background of "double carbon" target, China's power system will be transformed to a new power system with new energy as the main source, and energy storage as a ...
