

UAE-based Global South Utilities has begun construction on a 50 MW solar project with 10 MWh of battery energy storage systems (BESS) in the Central African Republic.

UAE-based Global South Utilities has started work on what would be CAR's largest-ever solar-storage plant.

Africa's energy storage deployment exhibits pronounced geographical clustering, with South Africa, Egypt, and Morocco forming a dominant first tier that collectively accounts for the ...

A snapshot of the battery energy storage landscape reveals contrasts, with a handful of nations leading a significant buildout of utility-scale battery energy storage systems (BESS) while ...

A central finding of the report is that Africa is effectively running two energy transitions at the same time: a government-led transition, centered on grid-connected and utility-scale solar ...

This is according to the Global Solar Council's Africa Market Outlook for Solar PV: 2026-2029 report. "Distributed solar is now growing as fast as utility-scale capacity, driven by low ...

You know how people say renewable energy's future lies in storage? Well, the Bangui Energy Storage New Energy Plant in the Central African Republic is literally proving that right now.

Bankability and risk management are becoming central to storage deployment, particularly for utility-scale and hybrid microgrid projects that depend on long-term financing. In response, ...

The central challenge is no longer how fast new power can be installed, but whether fragile grids can absorb it. As generation capacity rises, grid instability, persistent reliance on diesel and ...

ESA deploys large-scale BESS to help stabilise national grids, enable renewable firming, and provide clean, low-cost peak power. We are currently developing projects in Malawi (60MW/240MWh) and ...
