

The white paper highlights the power generation capability, weather resistance and performance of JA Solar's DesertBlue modules in deserts, Gobi areas and wastelands under testing...

China has made a revolutionary breakthrough in renewable energy engineering after it just launched the world's first solar-thermal power plant that utilizes a dual-tower system to generate...

In a groundbreaking development, China has activated a solar thermal power station in the Gobi Desert, a project characterized as a more cost-effective and efficient application of the ...

A groundbreaking solar thermal power plant in Xinjiang's Gobi Desert showcases China's renewable energy ambitions, combining cutting-edge technology with sustainable development goals.

China's Gobi Desert is home to a groundbreaking solar power station, a world-first design that slashes costs and significantly boosts energy efficiency.

Quantified the potential and benefits of large-scale photovoltaic (PV) deployment in China's Desert and Gobi regions (DGRs) under Water-Food-Ecology constraints. Large-scale PV ...

This Gobi Desert plant represents a major engineering and technological achievement, combining innovative design, energy storage, and efficiency improvements. It shows how solar ...

China has achieved a groundbreaking advancement in renewable energy technology with the recent inauguration of the world's first solar-thermal power plant, which employs a dual-tower ...

China just connected its largest single-capacity solar farm built on a former coal mining area, which is in the Gobi Desert, to the grid.

It systematically demonstrates the power generation capability, weather resistance, and comprehensive performance of DesertBlue modules in deserts, Gobi areas, and wastelands through simulations ...
