

Development of solar power generation in the United States

The Department of Energy (DOE) Solar Futures Study, released in 2021, outlines how solar energy could play a role in decarbonizing the United States' power grid, supplying as much as ...

Almost 70 gigawatts (GW) of new solar generating capacity projects are scheduled to come online in 2026 and 2027, which represents a 49% increase in U.S. solar operating capacity ...

This timeline features the key innovations that have advanced the solar industry in the United States. Learn more about these key events from 1955 to present.

Solar continues to dominate new electricity generation capacity added to the grid in the United States, according to the Energy Information Administration's (EIA) latest release of its Electric ...

With increasing government incentives, declining cost, and concerns for sustainable energy growth, harnessing solar power has become a widespread reality in the U.S. and is gaining ...

Solar deployment and electric vehicle (EV) sales broke records in 2023 and 2024. Renewables now dominate new power generation capacity, while new domestic clean energy ...

Find up-to-date statistics and facts on the solar photovoltaic industry in the United States.

Solar power includes solar farms as well as local distributed generation, mostly on rooftops and increasingly from community solar arrays. In 2024, utility-scale solar power generated 219.8 terawatt ...

The modern solar power industry in the United States was launched in the wake of the energy crisis of the late 1970s when skyrocketing oil prices motivated governments and energy ...

The Energy Information Administration (EIA) reported that, in 2024, the United States added a record 30 gigawatts (GW) of utility-scale solar to the grid, accounting for 61% of new ...
