

What are the classification and shipping requirements for lithium-ion batteries?

The classification and shipping requirements for lithium-ion batteries depend on their size and energy capacity (Watt-hours). For standalone batteries. Strict UN-certified packaging. IUMI strongly supports the SoC limit of 30% for air freight and advocates similar principles for maritime transport.

What types of batteries do employers need to ship?

The employer must identify the different configurations of batteries that they ship, i.e. batteries by themselves - sodium ion batteries, lithium batteries and/or batteries packed with equipment and/or batteries contained in equipment, or combinations of these batteries and equipment provisions.

What are the new packaging requirements for lithium ion batteries?

Revised Packing Instructions: More stringent requirements for UN-certified packaging, capable of withstanding specific drop tests. State of Charge (SoC) Emphasis: Increased scrutiny on the SoC for standalone lithium-ion battery shipments, with a general requirement not to exceed 30% of rated capacity.

Do lithium batteries need a shipper's Dangerous Goods Declaration?

In addition, a Shipper's Dangerous Goods Declaration (DGD) is generally required when shipping fully regulated lithium batteries, such as those not meeting exemption criteria. However, the need for a DGD depends on factors like battery type, quantity, and mode of transport - with air and ocean regulations differing significantly.

Shipping lithium batteries? Learn how to pack and ship them safely and how different rules apply depending on the mode of transport.

The Carriage of Electric Vehicles, Lithium-Ion Batteries, and Battery Energy Storage Systems by Sea Executive Summary The rapid global adoption of electric vehicles (EVs), lithium ...

Fires and explosions linked to improper battery shipping have led to increasingly strict regulatory oversight across the globe. This in-depth article explores lithium battery shipping ...

Shipping batteries--especially lithium batteries--requires strict compliance with international transport regulations. Whether you are shipping by sea or by air, understanding the ...

If you're in the renewable energy or logistics industry, you know that shipping energy storage batteries isn't as simple as mailing a package. These high-capacity devices demand strict adherence to ...

Battery storage transportation safety Lithium-ion battery shipping regulations Hazardous materials transportation batteries Battery transport compliance Energy storage logistics Safe battery ...

Learn everything about regulations on shipping lithium batteries, including packaging rules, labeling

requirements, and international compliance standards for air, sea, and ground transport.

Shipping battery energy storage systems -high energy, high risks? In the past few months, Gard has received several queries on the safe carriage of battery energy storage systems (BESS) on ...

State of Charge (SoC): The State of Charge (SoC) represents the percentage of capacity stored in a battery or energy storage system relative to its rated capacity.

The complexity of lithium battery shipping regulations reflects the serious safety considerations involved in transporting these energy storage systems.
