

Two new solar minigrid projects in sub-Saharan Africa will power Ethiopia's agrarian economy and 15 Nigerian universities.

Can minigrids and the main grid be friends? Absolutely. Interconnected minigrids show the way. By...

Improving energy access in Ethiopia by de-risking clean energy minigrids for commercial investment through innovative business models, increased cooperation, and enhanced stakeholder capacity.

The support to access to clean energy decreases costs, thereby increasing financial viability and promoting scaled-up commercial investment in renewable mini-grids. The focus will be on cost-reduction ...

One of the main advantages of using Sentinel satellite data is its frequent global coverage every 5 days. Time series are particularly important for understanding agricultural productivity and soil fertility around a ...

Through this project, EnGreen is helping Ethiopia unlock the full potential of renewable mini-grids -- creating an enabling environment for investment, accelerating rural electrification, and fostering inclusive economic growth.

Many villages in Ethiopia are remote and still not connected to the national electric grid. Minigrids utilizing the locally available renewable energy resources are proposed to provide electricity to such villages.

About 624km of mini-grid power will be generated, with more than 31,000 Ethiopians benefiting from access to electricity for lighting and cooking through a new Africa Mini-grid Programme (AMP) to be ...

Ethiopia aims to achieve universal electricity access by 2030, and microgrid (MG) development is expected to play a pivotal role in meeting this goal.

Even though there is large opportunity for the development of minigrid clusters in Ethiopia, significant technical and economic challenges hinder the large-scale implementation of minigrid clusters in ...
