

Can a 3KW Solar System power a home?

(In other words, don't expect a 3kW solar system to power an average American home's lights, electronics and appliances.) Most solar energy companies will tell you that 3 kW of power isn't enough to cover all your electricity use, but adding a 3kW solar system to your roof or backyard can still help you lower your utility bills.

How much electricity does a 3 kilowatt solar system produce?

Taking an average from our examples in Minnesota and New Mexico above, let's say your 3-kilowatt solar energy system produces 14 kWh of power per day. Over 30 days, your system would produce about 420 kWh of electricity per month. That's 420 kWh you don't have to pay your utility company for.

How much roof space does a 3KW Solar System need?

Today, most of the high-quality solar panels installed on homes fall somewhere between 300 watts and 450 watts of capacity. Therefore, you are likely to need between 168 and 180 square feet of roof space to accommodate a 3kW system.

How many solar panels do you need for a 3KW system?

The number of solar panels you need for a 3kW system depends on the wattage of your solar panels, but you'll likely need eight to 10 panels if you go with the kinds of panels normally used for residential applications.
