

What is a solar generator?

A lot of folks may be a little confused by the term solar generator. They may associate "generator" with the noisy, gas-powered lump that sits and clatters away in the background in the campsite. A necessary evil to be tolerated in the quest for AC power on site. And this is where the solar generator really shines.

What is a solar generator & how does it work?

And this is where the solar generator really shines. Often referred to as a solar power station or solar energy station, a solar generator is essentially a full-functioned solar power grid in a suitcase. With a twist, though, as you can recharge their batteries with mains power, car alternator feeds in addition to the obvious solar panel inputs.

What is included in a DIY solar generator?

Input ports are generally MC 4 solar panel sockets and appropriate inlets for any external power sources you would like to include. Switches typically include a system on/off switch, switches for specific outlets, and switching for accessories. One of the more commonly included accessories in DIY solar generators builds work lights.

Can you build your own solar generator?

You have proved that not only can you build your own custom DIY solar generator but probably build a better and more flexible product than a store-bought example. In addition, by using solar energy, you're making our world a better place.
