

Ireland Communications Green Base Station Power Generation Range

In predicting the future of electricity generation supply in Ireland and Northern Ireland, we have endeavoured to use the most up-to-date information available at the time of the data freeze for this ...

In 2023, ESB Networks started providing quarterly status updates on micro-generation and mini-generation. By the end of Q1 2024, there are 88,574 micro-generation connections in ROI - ...

View our renewable electricity production by county dashboard, a thematic map providing a comparative visualisation of renewable electricity production in every county in Ireland.

The increased targets in Ireland and Northern Ireland have required a refreshed assessment of the type of capacity needed, the network required and the operational complexities of managing a power ...

The Smart Grid Dashboard is an EirGrid Group web-based application that enables users to view and compare some of the key all island power system statistics and graphs in one location.

The table below gives a detailed overview of the fossil-fuel based power plants operating in Ireland in 2017. The data is publicly available and updated annually by the Irish Transmission System Operator ...

The electricity distribution network will need to both support a step change in the amount of renewable generation connected to the distribution network, and to meet significantly increased electricity ...

By 2030, in order to meet the target of up to 80% or more generation from renewable sources, it is estimated that an additional 10GW of generation will need to be connected.

EirGrid and SONI, as transmission system operator for Ireland and Northern Ireland respectively, are pleased to present the All-Island Generation Capacity Statement 2019-2028.
