

Is solar energy a good source of energy?

Solar energy is by far the largest potential energy source available on earth. Traditionally, most of this energy has been exploited in the form of solar heat, but in recent decades the costs of producing solar electricity have fallen dramatically.

Is the Sun a good energy resource for the north?

For a good half of the year the sun is a great energy resource for the north. The harsh northern climate is usually cited next in the argument against solar energy in northern climates.

Can solar energy modules be installed in northern regions?

Installing solar energy modules in northern regions can be challenging since it must be adapted to the harsher climate. One important adaptation is that solar modules in northern regions need to be installed with a higher tilt or inclination.

Why is solar energy important in northern Sweden?

In northern regions, there are significantly more daylight hours in summer and significantly fewer in winter. Because of this, the potential for producing solar energy in northern Sweden, for example, is often similar in summer to that of central Europe.

During the colder months, solar power's efficacy and efficiency become questionable. Businesses are considering turning to sustainable energy to help offset their electric costs. Throughout this article, ...
