

One of the most significant risks associated with storing or operating a generator indoors is carbon monoxide (CO) poisoning. Generators produce CO as a byproduct of combustion. Since ...

Don't put fuel in a hot generator. Turn it off and let it cool before refueling. Only put fuel in containers made for fuel. Never store fuel inside your home. Take care of cords. Plug appliances into ...

Storing or operating your generator indoors is not a good idea. As well letting it sit outside exposed to the elements is equally a bad idea.

Place the generator outdoors facing away from doors, windows and vents. Never use a generator inside a house, basement or crawl space - not even inside a garage with the door open.

Thinking of tucking your generator into a cosy little box to keep it safe from the weather? Don't. Generators and enclosed spaces go together like a barbecue in a tent--dangerous and ...

If you plan to store fuel with the generator, make sure to use an appropriate container and store it in a safe location away from ignition sources. Also, be aware of the shelf life of your fuel, ...

Portable fuel-based generators must operate outside, even during storms, because they emit dangerous exhaust fumes, including carbon monoxide (CO). It's essential to protect your ...

Generators produce heat and require air circulation. When stored outdoors, avoid enclosing the generator in an airtight container, as inadequate ventilation can cause overheating or ...

One common question among generator owners is whether it is safe to store a generator inside the house. This article explores the risks associated with indoor generator storage, safety ...

Gasoline and other generator fuels should be stored and transported in approved containers that are properly designed and marked for their contents, and vented.
