

We expect the combined share of generation from solar power and wind power to rise from about 18% in 2025 to about 21% in 2027. In our STEO forecast, utility-scale solar is the fastest ...

The extra layer of scrutiny for wind and solar contrasts with actions by the Trump administration to make it easier and cheaper for companies to produce oil, coal, gas and nuclear power.

At least 15% of counties in the U.S. have effectively halted new utility-scale wind, solar, or both, USA TODAY found. These are not the solar panels you might have on your house but installations ...

Local governments across the U.S. are blocking new clean energy plants. See the best locations for wind and solar power, and where it's being stopped.

Falling solar deployment is particularly problematic given the skyrocketing pace of U.S. electricity demand. From electrification to AI, America is expected to see massive jumps in electricity ...

The development of new wind and solar power plants is now heavily restricted or outright banned in about one in five counties across the country, according to a new and extensive survey of ...

Residents and local restrictions are delaying and blocking renewable energy projects in the United States at an accelerated rate, according to a study from Columbia University. From pv ...

President Donald Trump on Wednesday said his administration will not approve solar or wind power projects, even as electricity demand is outpacing the supply in some parts of the U.S.

Curtailing the Solar Surge In 2024, solar added more new capacity to the U.S. grid than any energy technology in the past two decades. Solar has been the largest contributor of new ...

And while solar power has found more broad acceptance, 2023 was the first year to see almost as many individual counties block new solar projects as the ones adding their first projects. ...
