

Is solar power generation no longer profitable

The federal solar tax credit ends after December 31, 2025. That means solar panels will no longer be a viable investment for homeowners, right? Wrong. It's still one of the smartest long ...

Residential solar might be down today, but its long-term prospects remain solid. We see that residential solar is poised for steady growth, especially for companies that take the right steps ...

To take it from recent headlines, it seems as though the global solar-power industry, following half a decade of record growth and governmental investment, flew just a bit too close to the ...

When solar power is generated in large quantities at the same time, the value of these kilowatt-hours decreases. Investors then calculate more cautiously, and projects require more ...

In this article, we'll offer a detailed analysis of solar farming's profitability, examining factors like technological advancements, government incentives, and market trends that influence its ...

Far from a sector on life support, the solar industry is growing, but it will need to adapt to the new political and economic environment if it is to continue making progress.

Solar remains the generation technology of choice across the United States, as illustrated by the high level of demand in 2024. While 2023 was a year of recovery, 2024 was the year of ...

2025 has been a challenging year for renewables. The new tax law, commonly referred to as the One Big Beautiful Bill Act, rolled back many clean energy tax credits and imposed new restrictions, ...

In our STEO forecast, utility-scale solar is the fastest-growing source of electricity generation in the United States, increasing from 290 BkWh in 2025 to 424 BkWh by 2027.

Similar to wind power, solar power is promoted by large federal subsidies and state mandates for renewable energy. Solar projects get a 30% investment tax credit from the Democrat ...
