

How has global solar PV manufacturing capacity changed over the last decade?

Global solar PV manufacturing capacity has increasingly moved from Europe, Japan and the United States to China over the last decade. China has invested over USD 50 billion in new PV supply capacity - ten times more than Europe - and created more than 300 000 manufacturing jobs across the solar PV value chain since 2011.

How much energy does a solar system produce in Japan?

In Japan, the average daily energy yield for solar installations is approximately 4.07 kWh per kWp installed, resulting in an annual yield of around 1,485 kWh per kWp, reflecting efficient energy production under optimal conditions. As of 2023, the price of electricity for households in Japan was approximately USD 0.20 per kWh.

What are China's solar PV exports?

In 2021, the value of China's solar PV exports was over USD 30 billion, almost 7% of China's trade surplus over the last five years. In addition, Chinese investments in Malaysia and Viet Nam also made these countries major exporters of PV products, accounting for around 10% and 5% respectively of their trade surpluses since 2017.

How big is the solar manufacturing industry?

To meet this growing demand, the solar manufacturing industry has experienced remarkable growth in the last few years, with global module manufacturing capacity increasing from only 326 gigawatts in 2020 to more than 1.3 terawatts in 2023.

Solar panels exported to Japan primarily include photovoltaic modules, solar cells, and advanced solar technologies such as BIPV systems. These products are derived from various ...
