

Declining lithium-ion battery costs and advancements in battery chemistry are making large-scale energy storage projects more viable in Mexico's utility and non-utility sectors.

Mexico's new 30% battery storage mandate is set to transform the renewable energy sector. Learn how this policy impacts grid stability, private investment, and the future of energy ...

A regulatory framework for energy storage has been in effect since March, but its implementing regulations may take up to two years to finalize, potentially delaying project development.

Drawing from both academic and industry publications, this thesis presents the state of the art of energy storage technologies suitable for long-duration applications and performs a technoeconomic analysis ...

Luis Stone, CEO and Founder, ErgoSolar, announced a US\$10 million investment to establish Mexico's first lithium and sodium battery factory, with potential locations being Puebla or ...

Future wind and solar energy projects in Mexico will be required to colocate battery energy storage systems equivalent to 30% of their capacity, a senior government official told the ...

The Mexico Household Energy Storage Lithium-ion Battery market is positioned for robust expansion, driven by policy support, declining costs, and increasing renewable adoption.

In recent years, Mexico's outgoing President, Andres Manuel Lopez Obrador (AMLO), has sought to develop lithium resources in the state of Sonora. AMLO and many Mexican ...

The Instituto Politécnico Nacional (IPN) is actively developing projects focused on lithium utilization, aiming to capitalize on the fact that Mexico holds some of the largest lithium reserves in the world--a ...

A secure, stable supply of lithium would allow Mexico to invest in clean energy technologies more reliably, particularly solar and wind, whose intermittent nature requires substantial ...
