Global demand for energy storage is surging, yet many still ask: "How much does it cost per megawatt-hour to store renewable energy?" In 2023, lithium-ion battery systems averaged \$132-\$245/MWh worldwide, down ...

For a grid aiming for 100% availability, the target energy storage capacity cost is stated as \$10-12/kWh (\$10,000-\$12,000/MWh). For 95% availability, the threshold rises to \$150/kWh.

But how much does energy storage cost per megawatt (MW)? In this article, we'll delve into the factors that influence these costs and provide some industry estimates.

Thus, a true cost accounting demands that the costs of both primary and secondary sources be included when the cost of storage is compared to the cost of generating electricity in real time to meet demand.
