

We simulate the implementation of microgrids with PV generation using Alternating Current Optimal Power Flow (AC-OPF). The results of this thesis show the limits of feasible reactive power support ...

Using peer-reviewed publications from 2013 to 2024 using the most commonly used reporting items for Systematic Reviews and Meta-Analyses approach, this study examines ...

This paper presents a systematic literature review encompassing recent advancements in MG technology. It delves into MG architecture, diverse control objectives, associated ...

This paper presents a review of the microgrid concept, classification and control strategies. Besides, various prospective issues and challenges of microgrid implementation are ...

This paper aims for effective power management in a renewable rich microgrid using photovoltaic (PV) system as dispatchable source to satisfy load demand under various operating conditions to maintain ...

The paper provides insights into the protective features, performance evaluation, and applicability of these intelligent methods across different microgrid types.

In this paper, an isolated DC microgrid is simulated with solar photovoltaic (PV) as the RE source to supply power to resistive DC charges along with a hybrid energy storage ...

In this study, a fuzzy multi-objective framework is performed for optimization of a hybrid microgrid (HMG) including photovoltaic (PV) and wind energy sources linked with battery energy ...

State of charge control based improved hybrid energy storage system for DC microgrid This paper proposes a non-communication power management plan for a renewable solar-photovoltaic (PV) ...
