

The carbon fiber carrier board can be combined with the solar cell sheet and the transparent plastic packaging material layer to form a carbon fiber solar panel.

Discover Semixlab's CFC pallet designed for high-temperature photovoltaic processes such as sintering and PECVD. Lightweight, durable, and dimensionally stable carbon fiber composite tray for solar ...

Find high-quality solar wafer carriers for efficient photovoltaic systems. Customize your carrier with durable, transparent materials for optimal performance.

We design and manufacture reinforced wafer carriers. Our unique insert material allows a higher operating temperature range than standard carbon inserts.

We also supply finished articles like heaters, crucibles and insulation components for Czochralski pulling of monocrystalline silicon ingots. Our portfolio is completed by wafer carriers for PECVD units made ...

Designed for advanced wafer transport, our 200 mm wafer carriers offer dramatic performance benefits over traditional low- and midrange wafer carriers. The wafer is in a predictable ...

A wafer carrier for carrying solar cell wafers during a deposition process is described. The carrier is coated with pyrolytic carbon, silicon carbide, or a ceramic material, and is...

DuPont(TM) Vespel® CR-6110 is a high performance thermoplastic composite used for semiconductor wet processing and wafer handling applications. This article describes some of the many benefits of this ...

SGL can supply carbon fiber fabric, graphite foil and graphite slurry coating to encapsulate the rigid or soft felt in order to prevent direct corrosion of the felt components.

RTP Company's carbon fiber-filled PEEK(TM) compound provides a grounding path and lines the carrier in areas where it may contact a wafer or equipment.
