

# Probability of solar power generation in India

India must reassess its solar potential to unlock investment, drive green growth, and lead global clean energy transitions through data-driven insights.

The Government of India has set an objective of adding 175 GW of installed renewable-energy capacity by 2022, with 100 GW coming from solar power, 60 GW from wind power, 10 GW ...

India Marching Ahead in Solar Energy Growth in Solar Installed Capacity (MW) as on 11.02.2025 Figures and Statistics

The study estimates India's total solar potential at 10,830 gigawatts (GW), far exceeding previous assessments while identifying new opportunities across both conventional and innovative ...

Programme/Scheme wise Cumulative Physical Progress as on 31th January, 2025 ... Solar Power\* (Cumulative) : 140.60 GW

Maharashtra, Chhattisgarh, Odisha<sup>5</sup> In July 2025, India's solar power capacity had increased by 4,000%, and the country's total renewable energy capacity reached 227 GW. Palli village in Jammu ...

By the end of 2025, India's solar power installed capacity reached 135.81 GW AC. [1] India is one of the world's fastest adopters of solar power, making it the third-largest producer of solar power globally as ...

Indeed, in 2023, India was the third-largest solar energy producer in the world, adding over 16.6 GW of new solar installations. This growth is driven by ambitious government targets,...

As per Renewable Energy Statistics 2025 by IRENA, India ranks 5th worldwide in total electricity energy generation from renewable energy sources and holds the 3rd position in electricity generation from ...

Tracking India's solar future: Why every GWh matters in energy transition As India builds renewable capacity at record speed, the focus must shift from scale to strength-ensuring every GW ...

OverviewHistorySolar potentialInstallations by regionInstallations by applicationConcentrated solar powerHybrid solar plantsSolar heatingSolar power in India is an essential source of renewable energy and electricity generation in India. Since the mid-2010s, India has increased its solar power significantly with the help of various government initiatives and rapid awareness about the importance of renewable energy and sustainability in the society. In order to decrease carbon dioxide emissions, reduce reliance on fossil fuels, with coal being th...
