

Discover how solar and storage projects by Zelestra are shaping Chile's grid, enhancing reliability, and driving Chile's energy transition.

The ability to store and dispatch large amounts of energy allows for greater penetration of renewable energy sources into the grid, particularly solar power from the Atacama Desert.

AustriaEnergy's project aims to tap into the strong solar resources of Chile's Atacama region to produce clean, non-conventional renewable energy, supporting decarbonization efforts.

The horizon for energy storage in Chile has never been clearer or more promising. The scheduled regulatory refinements for 2026 will solidify the business case, while the insatiable ...

Chile is rapidly moving to build more power generation capacity, with much of that effort focused on renewable energy resources and battery energy storage systems (BESS).

Currently, 36 of the 129 large-scale projects Latin America projects with an energy storage component under development are in Chile, including 32 out of 71 of the region's early works ...

As part of the 2025 national budget, Chile is allocating \$1.2 billion in subsidies specifically for energy storage initiatives. Priority funding is directed toward integrated solar-plus ...

To further boost the storage market in Chile, it is important to expand the use of energy storage for both generation and transmission applications, and establish a remuneration framework for ancillary ...

Solar and energy storage deployment is booming in Chile, spurred on by supportive government policy that has been markedly stable for 15 years. Indeed, the nation leads Latin ...

Chinese companies have in recent years built, or announced plans to build, Chile's longest power line, solar plants and wind farms, while in battery storage, solar giant Trina has ...
