

Will solar power grow in 2025?

We expect that solar electricity generation supplied to the grid managed by the Electric Reliability Council of Texas (ERCOT) will grow from 56 BkWh in 2025 to 106 BkWh by 2027. Increasing amounts of battery storage capacity help to support the fluctuations in solar output during the day.

How many kilowatthours a year does electricity generate?

Electricity generation by the U.S. electric power sector totaled about 4,260 billion kilowatthours (BkWh) in 2025. In our latest Short-Term Energy Outlook (STEO), we expect U.S. electricity generation will grow by 1.1% in 2026 and by 2.6% in 2027, when it reaches an annual total of 4,423 BkWh.

How many GW of solar generating capacity will come online in 2026?

Almost 70 gigawatts (GW) of new solar generating capacity projects are scheduled to come online in 2026 and 2027, which represents a 49% increase in U.S. solar operating capacity compared with the end of 2025. Much of the utility-scale solar generation capacity additions will come online in Texas.

Will solar power and wind power grow in 2027?

We expect the combined share of generation from solar power and wind power to rise from about 18% in 2025 to about 21% in 2027. In our STEO forecast, utility-scale solar is the fastest-growing source of electricity generation in the United States, increasing from 290 BkWh in 2025 to 424 BkWh by 2027.

Progressing towards a renewable energy future encapsulates the aspirations of the energy sector, and iron stands poised to play a complementary role in that journey. Through the exploration ...

A young start-up with roots at ETH Zurich and HSG wants to solve one of the biggest problems facing the energy transition: seasonal power shortages. The solution is a process that ...

In the evolving world of renewable energy solutions, the Single Phase Hybrid Inverter has emerged as a game-changer for residential and small commercial setups. This technology is designed to integrate ...

We expect the combined share of generation from solar power and wind power to rise from about 18% in 2025 to about 21% in 2027. In our STEO forecast, utility-scale solar is the fastest ...

The steel industry is one of the largest contributors to global carbon dioxide emissions, primarily due to its reliance on fossil fuels. Traditional steel production methods involve the smelting ...

Here, we propose a solar-to-iron flexible production system, which includes electrochemical ironmaking and iron-based energy power systems (iron-air batteries and iron ...

Introducing Our New 1.3 MW Solar Power Project Located at Rohra, Simga, this landmark project marks Surya Iron's ambitious entry into renewable energy generation. Designed for both captive and ...

This study develops an optimization-based scheduling framework for coordinating the energy-intensive operations of a steel enterprise with estimated solar power availability. Unlike prior ...

Developments in new energy generation technologies have led to renewed interest in ERI because of its green and low-carbon properties.
