

How much do solar panels cost?

You pay about \$10,900. If you choose to have half of this energy generated by solar panels, it'll cost \$6550. All the energy for a large family: a family that consists of 5 or 6 people and wants to generate all the energy with solar panels easily pays \$12,800, as you need 26 solar panels to achieve this.

What is the relative cost of solar energy?

Another measure of the relative cost of solar energy is its price per kilowatt-hour (kWh). Whereas the price per watt considers the solar system's size, the price per kWh shows the price of the solar system per unit of energy it produces over a given period of time. Net cost of the system / lifetime output = cost per kilowatt hour

How much does solar cost per watt?

The price per watt for larger and relatively straightforward projects are often within the \$2.50 to \$3 range. Claiming incentives like tax credits and rebates can bring the PPW even lower. However, the following factors may push your solar price per watt into the \$3 to \$4.50 range.
