

OverviewManufacturing of PV systemsEtymologyHistorySolar cellsPerformance and degradationEconomicsGrowthOverall the manufacturing process of creating solar photovoltaics is simple in that it does not require the culmination of many complex or moving parts. Because of the solid-state nature of PV systems, they often have relatively long lifetimes, anywhere from 10 to 30 years. To increase the electrical output of a PV system, the manufacturer must simply add more photovoltaic components. Because of this, economies of scale are important for manufacturers as costs decrease with increasing output.

As we pursue advanced materials and next-generation technologies, we are enabling PV across a range of applications and locations. Many acres of PV panels can provide utility-scale ...
