A diagram of a parabolic trough solar farm (top), and an end view of how a parabolic collector focuses sunlight onto its focal point. The trough is usually aligned on a north-south axis, and rotated to track ...

Imagine using sunlight to power entire cities - not with solar panels, but with mirrors that create enough heat to generate steam for electricity. That's exactly what trough solar thermal power generation ...

Figure 10.2: Kuraymat parabolic trough solar plant, Egypt. The plant has the total solar aperture area of 130,800 m<sup>2</sup> and expected electricity generation of 34,000 MWh/year.

Figure 1 shows a process flow diagram that is plants in operation today.

System diagram of a conventional solar thermal parabolic trough power plant for the provision of process heat or electricity generation. Heat transfer medium: oil (green), storage medium: molten salt (blue).
