

This study introduces a novel hybrid system in which piezoelectric and geothermal properties are integrated into basalt and quartz stones to generate green electricity.

These granite (left) and soapstone (right) samples could help store heat from the sun to produce electricity. The next generation of sustainable energy technology might be built from some ...

A Danish innovation project called GridScale is exploring the use of heated basalt stones in steel tanks to store electricity from wind and solar sources as thermal energy.

But what makes his box of white-hot rocks so significant is they were not heated by burning tons of coal or gas, but by catching sunlight with the thousands of photovoltaic solar panels ...

This study focuses on enhancing solar thermal energy storage efficiency using a novel ternary salt-based phase change material (PCM),  $\text{PbSO}_4\text{-NaNO}_3\text{-NaCl}$ , combined with natural stones.

Natural stone varieties play a crucial role in passive solar design, with different types offering unique thermal properties and energy-efficiency benefits. In modern stone architecture, ...

Using an approach called concentrated solar power, a team of researchers from Tanzania found that certain granite and soapstones could store solar heat at a sufficiently high ...

Scientists published a study in the journal *Scientific Reports* showing the potential of common stones like basalt or quartz as energy sources. The researchers found that it is possible to ...

Many DIY enthusiasts opt for traditional photovoltaic panels, while others explore innovative ideas like using stones, as discussed previously. By pursuing step-by-step guidelines and ...
