

Monitoring GHG emissions is a critical component of any jurisdiction's planning and emissions reduction strategies, although the Vatican City State's (VCS) contribution to global emissions is negligible.

The tiny sovereign city-state--barely 43 hectares nestled in the heart of Rome--has presented an ambitious new climate plan to the United Nations, pledging to cut its greenhouse gas ...

Italy has agreed to a Vatican plan to turn a 430-hectare (1,000-acre) plot of land north of Rome into a vast solar farm that will generate enough electricity to meet the needs of Vatican City.

The Vatican aims to eliminate more than a quarter of greenhouse gas emissions it produces over the next decade, according to plans it has submitted to the United Nations. The Holy ...

A wide-ranging environmental and energy sustainability project is underway at the Papal Basilica of St. Peter in the Vatican, aimed at reducing emissions, improving air quality, and promoting ...

VATICAN CITY (CNS) -- St. Peter's Basilica and some of its surrounding buildings are working to reduce their environmental impact by becoming more energy efficient and promoting sustainability.

The Vatican has pledged to cut greenhouse gas emissions by 28% by 2035 compared to 2011 levels. A 1,000-acre solar farm near Rome will power the Vatican's transition to becoming the ...

The new plan outlines initiatives to improve energy efficiency in Vatican buildings, expand the use of electric vehicles, and strengthen waste management and reforestation programs.
