

# What battery should be used to power the inverter

What type of current does an inverter battery provide?

Inverters offer small amounts of power over a long time and only inverter batteries provide AC current which is needed to power your appliances when you are off-grid. Lead-acid batteries are also used in cars, but if you want to power your microwave, fridge, and other appliances you need a lead-acid battery specifically for use with inverters.

Do inverters need a battery?

Not every inverter requires a battery, and understanding this can help you make an informed decision about your power backup setup. Grid-Tied Inverters: These inverters work directly with the power grid and do not need batteries. They're commonly used in solar power systems where excess electricity is fed back to the grid.

What type of batteries are used in inverter systems?

The most commonly used batteries in inverter systems are tubular lead-acid batteries and flat plate lead-acid batteries, with lithium-ion batteries becoming more popular in recent years. Tubular batteries are preferred for their deep discharge capacity and long life, making them ideal for homes with frequent power cuts.

Do you need a lead-acid battery for an inverter?
