

What is the proportion of photovoltaic panel investment income

Is distributed photovoltaic (PV) a good investment?

Except 100% grid-connected mode, the IRR of distributed PV power plants in three areas is higher than 8% which has shown good economic benefits. As subsidies continue to fall, the technology and cost performance of distributed photovoltaic (PV) determines the progress of its grid parity.

How much does PV investment cost?

At present, for conventional distributed PV projects, the cost of investment is roughly 6.5 yuan/W. Fig. 8 gives a detailed breakdown of the cost of investment. Among the investment costs, PV module costs account for 46% of the investment cost, which takes up the largest part.

What is the investment cost of distributed PV?

The investment cost of distributed PV consists of the cost of PV modules, balancing system cost (BOS), and soft cost. The cost of PV modules is determined by raw material costs, notably silicon costs, cell processing/manufacturing costs and module assembly costs.

Why is economic analysis important in the photovoltaic industry?

Although the photovoltaic industry has enormous growth potential and good market prospects, it also faces many risks and challenges such as consumption problems and unstable income. Economic analysis is particularly important for investment decisions and sustainable development of photovoltaic projects.

Solar PV capacity grew from about 5 gigawatts in 2005 to roughly 940 gigawatts in 2021. Solar Energy Statistics state that solar energy is the most abundant energy source on Earth.
