

What to do with photovoltaic horizontal board drag blocks

What is a photovoltaic block?

Each block provides a firm base for photovoltaic (PV) panels, featuring tongue and groove interlocks that keep rows aligned and securely connected to create a larger surface area. The modular mould system allows blocks to be manufactured in a wide range of sizes - from 500mm to 1.5m wide, up to 6m long, and 150mm to 280mm thick.

What is a solar ballast block?

When you need a foundation system that combines structural stability with quick installation, solar ballast blocks are the perfect solution. Each block provides a firm base for photovoltaic (PV) panels, featuring tongue and groove interlocks that keep rows aligned and securely connected to create a larger surface area.

How can I improve my solar panel performance?

Adjustable tilt frames can boost seasonal output. Avoid Shading at All Costs: Even small shadows can drastically cut output. Trim foliage and space rows to prevent inter-row shading. Maintain Airflow: Leave a gap behind panels for cooling, as cooler panels perform better.
