Generator fuses are generally located somewhere in the battery bay or on the control panel. Depending on what type of generator you have, you may also find them in the area where the electrical connections are made.

The generator windings, diode assembly and AVR can be checked using this procedure. With the generating set stationary remove AVR access cover and leads F1 and F2 from the AVR.

With the generator removed from the car, the first step is to remove the pulley from the front. The pulley is attached by a large nut threaded onto the armature shaft.
