

## Will the diverter use the energy storage system

It detects when your solar system produces excess energy beyond your current usage and diverts it towards heating your hot water or other electrical storage heaters instead of feeding it ...

Yes - most solar diverters, including eddi, are designed to work with existing electric hot water systems and immersion heaters. This means you don't need to install a new system; instead, a diverter like ...

Yes, solar power diverters can be used alongside battery storage systems to further enhance energy efficiency and flexibility. Are Solar Power Diverters Worth the Investment?

Power diverters are cost-effective and perfect for heating the hot water for either immediate or later use, while the battery storage offers energy independence by storing energy for ...

A solar diverter is a device that automatically redirects surplus electricity generated by your solar panels to other appliances or storage systems in your home, instead of feeding it back to ...

A diverter like Catch Power redirects excess solar energy to your electric hot water system rather than letting it export to the grid. It's a simple way to make the most of your self ...

But while it's technically possible to use a solar diverter with a battery storage system, it's generally not recommended. Batteries already do the job of storing extra solar power, so there's no ...

When excess energy is available, the diverter sends it to your immersion heater or thermal store, allowing you to enjoy hot water that's essentially powered by the sun. This application ...

Using a battery or power diverter is about replacing some paid energy use with free solar power, whether that is electricity, gas, or oil. In the case of a battery, this means reducing the amount ...

Power diverters, on the other hand, are limited in what they offer. Their main purpose is to heat water, so you won't benefit from the flexibility that comes with energy storage. If your household doesn't use ...
