

What type of wire should I use for a solar panel?

Use only solar-rated PV wire or USE-2 cable for panel connections. 1. System Current Calculate maximum current your wire must carry: The 1.25 safety factor accounts for NEC 690.8 (B) (1) requirement to size conductors for 125% of short-circuit current. 2. Wire Run Distance Longer distances require larger wire to maintain acceptable voltage drop.

How do I choose the right solar wires & cables?

Choosing the right solar wires and cables is essential to ensure the effective functioning of a solar energy system. Factors to consider when choosing the right wiring and cabling include: It is essential to choose wires and cables that have the correct voltage and amperage ratings for the specific solar energy system.

What type of cable should a solar system use?

Solar systems use two distinct cable types: ? Critical: Never use standard THWN wire for DC solar circuits. It lacks UV resistance and proper outdoor ratings required by NEC 690.31. Use only solar-rated PV wire or USE-2 cable for panel connections. 1. System Current Calculate maximum current your wire must carry:
